

Kanbina is an AI software company focused on Finance and Accounting.

A trading division of SystemsAccountants, the world's leading provider of specialist resource to deliver Financial Systems, ERP and EPM projects, Kanbina offers finance organisations the opportunity to use AI to leverage their ERP investments.

Kanbina's core software product is an AI services platform, which uses Machine Learning and High Performance Computing to remove human work in finance processes.

The Kanbina AI platform integrates seamlessly with any Cloud or On-Premise ERP application and enables up to 100% process automation.

KANBINA

ACCOUNTING INTELLIGENCE

A SystemsAccountants Company

AI Services for Core Finance Processes

KANBINA AP

Kanbina AP is our Accounts Payable Automation Platform.

Kanbina AP is the leading edge of process automation. 100% native AI technology and leveraging machine learning models, Kanbina AP executes tasks traditionally done by people such as invoice entry, extraction of line items, PO, vendor, department, subsidiary, VAT and sales tax, general ledger code matching and data cleansing.

REMOTE IMPLEMENTATIONS

AI Invoice Extraction is working in week 1 of an implementation. There is then a further week to build machine learning models with your ERP data. Deployment, model build and training can be executed remotely.

COSTS

Pricing can be based on either a cost-per-invoice basis or contracted as AI-as-a-Service.

Some clients will require additional ML models depending on the level of manual interventions to remove in their business.

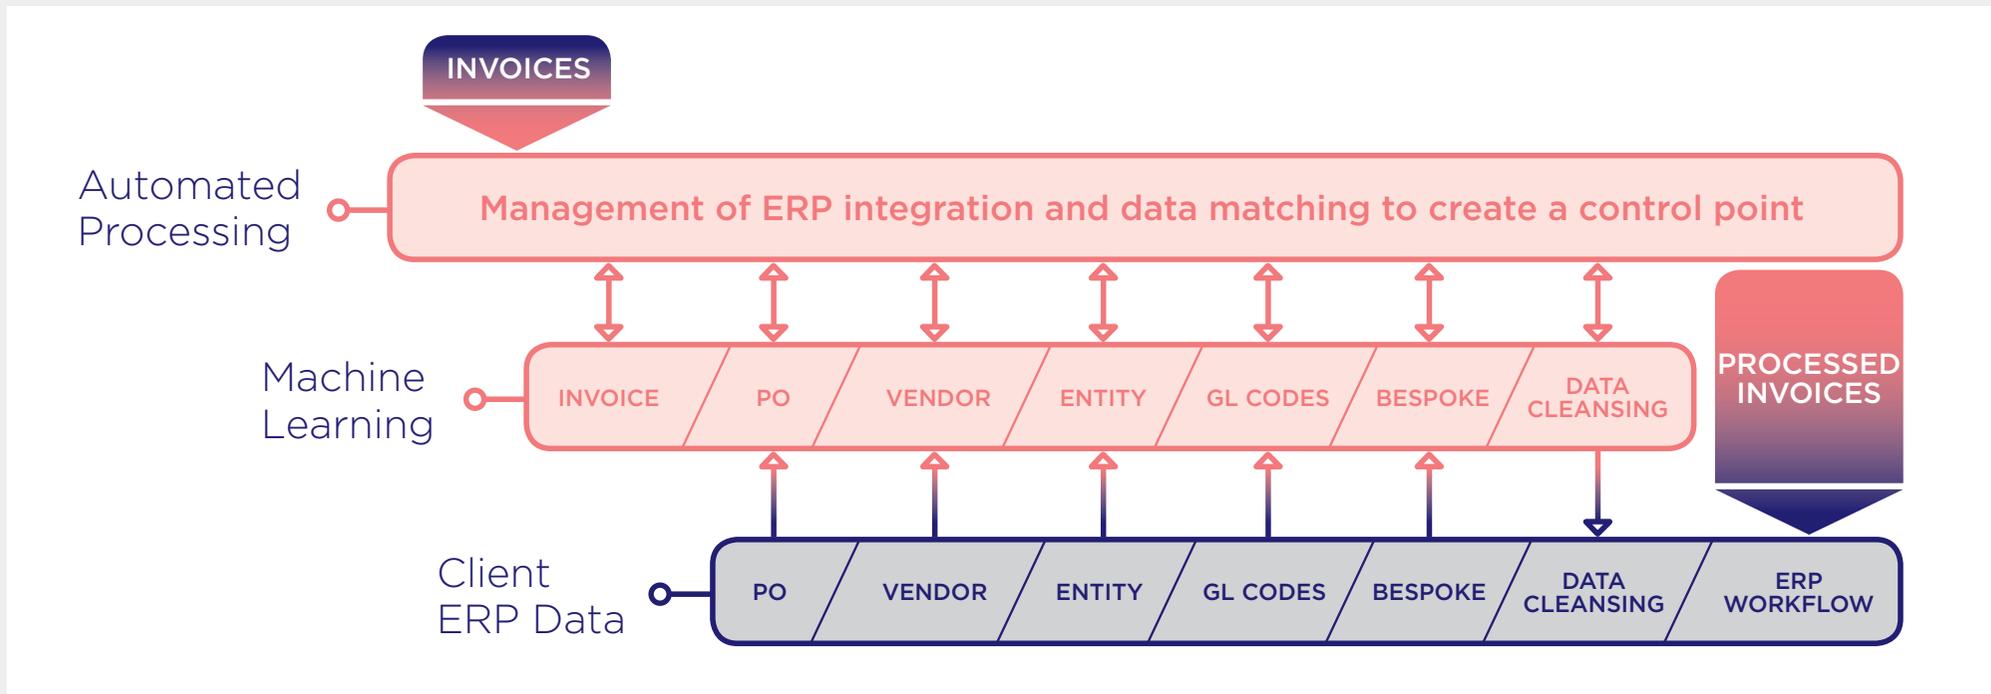

TECHNOLOGY

Our fully scalable, multi-tenant, industrially secure, AI platform is based on Microsoft Azure and models are developed and trained by our specialist data scientists and engineers.

How it works

KANBINA AP

AI Accounts Payable Automation

Why AI for AP?

- Eradicate up to 90% of your workload - a step change in productivity and costs
- Scale without adding more staff
- Increase operational resilience - insource offshored AP services without extra staff
- 100% touchless invoice management
- Optimise cash flow management
- Shift to solving business, rather than invoice processing challenges
- Attain world class operational excellence
- Operational cost saving potential of up to 70%

For greater control, transparency, efficiency, and value-for-money, don't outsource your accounting operations... revolutionise them with AI.

Custom Machine Learning Model Development

Extend AI to address your business challenges

Use our real time machine learning expertise to automate processing tasks such as reconciliations, VAT reporting, risk management, assurance and compliance reporting. Kanbina can be commissioned to develop and train bespoke Machine Learning Models, enabling you to leverage the Kanbina AI platform to automate all of your data processing tasks, freeing you to focus on revenue growth.
